

## Exterior Line Set Protection

Hardcast offers two innovative products for residential and commercial application.

**TPO Line Set Wrap**

**SEAL-TACK™ White**

These products are our answer to protecting line sets exposed to the elements. Although different in application, they both meet code requirements being adopted across the country.

### Things to consider when choosing an Exterior Line Set Protector

#### Why choose TPO Line Set Wrap?

The TPO rolled mastic sealant is a 6.5 mil TPO membrane laminated to a butyl adhesive sealant to form a 22 mil composite. The TPO Line Set Wrap is applied by peeling off the release liner while covering the pipe wrap insulation. Since this membrane is 100% solid, there is no shrinkage or additional coats required due to absorption by the insulation. This gives the product superior protection against damage from moisture, landscaping operations, equipment maintenance, and wind.

#### Why choose SEAL-TACK White?

SEAL-TACK is an easily applied water based coating engineered to coat foam insulation and seal cut ends of fibrous glass duct liner. It allows the foam insulation to remain flexible while providing excellent weather and sunlight protection.

- ***Both products provide excellent UV protection***
- ***TPO Line Set Wrap creates impact resistant surface***
