

MARKETING ANNOUNCEMENT

Cartridge Killer™
May 2016

To: Carlisle HVAC Products' Applicators

Carlisle HVAC Products is pleased to introduce Cartridge Killer™, an innovative sealant extrusion delivery system that allows applicators to apply a fine bead of SPRAY-SEAL™ Duct Sealant to boots, wyes, and other fittings. Cartridge Killer's specially designed tips can be placed directly in joints and seams, ensuring a precise product application that results in improved aesthetics and lower labor and material costs. Because Cartridge Killer is used with 5-gallon pails of SPRAY-SEAL, there is less change-over time and less waste. Combining SPRAY-SEAL'S best-in-class flexibility, elongation of up to 500%, low VOC content, and quick dry time with the Cartridge Killer application system saves time, product, and labor while providing a high-quality seal.

Cartridge Killer is sold with three different-sized tips so users can achieve the ideal bead size for their project, and features a stainless steel mesh filter between the gun and the tip to minimize clogging and keep the job on schedule.

Cartridge Killer - Ordering Information		
Part Number	Description	Quantity
325327	Cartridge Killer Spray Extrusion Kit	1
Cartridge Killer - Kit Contents
