

**Introducing the DynAir 6" Cut Cleat
October 11, 2018**

DynAir is pleased to introduce its new 6" Cut Cleat designed for TDC and TDF flange styles. The cleat is stamped from 22-gauge galvanized steel for durability and long-term performance. Stamping the cleat allows for full repeatability and ensures that every cleat meets the same performance criteria. The new 6" Cut Cleat features three integrated darts punched into the face to lock the cleat onto the flange and prevent any slippage or sliding along the flange length.

The DynAir 6" Cut Cleat will also work with Nexus J Flange and will complement our snap/drive cleats and the 4" and 6" cleats in galvanized steel or aluminum.

The DynAir 6" Cut Cleat is in stock and ready to ship (SKU # 332793)! The product is boxed in quantities of 250 to match up to our DynAir Multi-Matic C and F corners.

The [DynAir Cleat technical data sheet](#) has been updated to include the 6" Cut Cleat.

As always, thank you for your continued business.

Kind regards,

Frank Forrest
